

VINICIUS RODRIGUES SILVA

Software Engineer | Backend

Sao Paulo, Brazil | Open to remote opportunities | vrodrigues.code@gmail.com | linkedin.com/in/rsvinicius

PROFESSIONAL SUMMARY

Software Engineer specializing in JVM architectures, B2B billing/reconciliation engines, and mission-critical financial processing handling over 500M req/mo and +00B in global volume.

CORE SCALE & METRICS

- * B2C Scale Throughput: +500M monthly requests across microservices (Alelo Brasil)
- * B2B Financial Volume: +00B global processed volume and reconciliation (Trustly)
- * Peak Processing Rate: +500 TPS transaction processing, batch extraction, and streaming

EXPERIENCE

Software Engineer | Trustly

2025 - Present | Global Pay-by-Bank & Open Banking Leader

- Engineered core B2B billing and merchant invoicing pipelines ensuring strict accounting accuracy.
- Architected Spring Batch and Quartz scheduler engines for transaction extraction and reconciliation.
- Implemented low-memory file streaming (AWS S3, Lambda, SFTP) for high-volume enterprise reports.

Software Engineer | Alelo Brasil

2021 - 2025 | Corporate Benefits, Expenses & Payments

- Scaled core transaction processing to +500M monthly requests serving 10M+ cardholders across 150k clients.
- Built and maintained resilient Java/Kotlin microservices with Kafka, Redis, and PostgreSQL.
- Implemented OAuth2/JWT security and led database migrations with zero downtime.

OPEN SOURCE CONTRIBUTIONS

- * MockK v1.14.0: Fixed concurrent state leak in confirmVerified across asynchronous test suites.
- * dotme CLI: Autonomous declarative configuration management and atomic symlink synchronization in Go.

EDUCATION

- * MBA in Software Engineering (Concluded) | Universidade de Sao Paulo (USP/Esalq)
- * Bachelor of Science in Electrical Engineering | UNESP
