

Vinícius Rodrigues Silva

✉ vrodriques.code@gmail.com 🌐 rsvinicius.github.io/portfolio 🔗 linkedin.com/in/rs-vinicius 📄 github.com/rsvinicius

Skills

Programming Languages: Java, Kotlin, SQL, NoSQL, JavaScript, HTML, CSS
Frameworks & Libraries: Spring Boot, Spring Batch, Spring WebFlux, Javalite, Google Guice, Micronaut, Quarkus
Databases & Caching: PostgreSQL, Oracle, MongoDB, Redis, MySQL
DevOps & Cloud: AWS (S3, Lambda), Docker, GitHub Actions CI/CD, OpenShift, Datadog, Kibana, SFTP Pipelines
Languages: Portuguese (native), English (advanced), Spanish (basic)

Experience

Trustly
Software Engineer

Remote, Brazil
Jan. 2026 – Present

- Architected and maintained high-criticality B2B merchant billing and financial settlement pipelines handling +500 TPS and multi-billion-dollar transaction volume (+\$100B) with zero ledger discrepancy.
- Designed mass financial reports and automated reconciliation pipelines using Spring Batch and Quartz Scheduler, extracting and consolidating millions of daily transaction records.
- Engineered low-memory file streaming mechanisms (PDF, ZIP, CSV), integrating AWS S3, AWS Lambda, and automated secure SFTP delivery to partner financial institutions.
- Developed across resilient polyglot JVM frameworks (Spring Boot, Javalite, Google Guice) and optimized complex PostgreSQL queries and table locking, significantly reducing analytical execution times.

Alelo Brasil
Software Engineer

Barueri, SP
Nov. 2024 – Jan. 2026

- Scaled core card transaction processing and benefits microservices in Java/Kotlin (Spring Boot), sustaining +500M monthly requests serving 10M+ users and 150,000 companies under 99.99% availability.
- Architected decoupled asynchronous microservices utilizing ActiveMQ and Spring Batch with Redis distributed caching, mitigating latency spikes during peak retail hours.
- Conducted zero-downtime database schema refactoring and data migrations on high-volume Oracle and MongoDB databases.
- Led code reviews, fostered clean architecture standards, and mentored junior developers while improving test coverage.

Junior Software Engineer

May 2021 – Nov. 2024

- Developed RESTful APIs using Spring Boot for internal financial systems and the MeuAlelo customer platform.
- Implemented authentication and authorization features (OAuth2, JWT, RBAC) to strengthen application and transactional security.
- Worked with SQL and NoSQL databases for efficient data persistence, schema updates, and legacy code refactoring.

Education

University of São Paulo – USP/Esalq
Postgraduate Lato Sensu – MBA, Software Engineering

2024 – 2026
Concluded

- Program focused on advanced software engineering practices, including distributed systems architecture, microservices, Domain-Driven Design (DDD), design patterns, and scalable cloud systems.

São Paulo State University Júlio de Mesquita Filho – UNESP
Bachelor's Degree in Electrical Engineering

August 2016 – January 2023
Concluded

- Comprehensive 5-year STEM foundation with emphasis on control systems, automation, signal processing, applied programming, algorithms, and mathematical modeling.

Projects

MockK

Open-Source Contribution

- Core unit testing and mocking library for Kotlin. Fixed state leak in verification mechanisms ensuring hermetic test isolation.

Technologies: Kotlin, Testing Frameworks, Mocking Libraries

dotme

Creator & Maintainer

- Declarative dotfiles management CLI tool featuring atomic symlink reconciliation, pattern filtering, and syntax validation.

Technologies: Shell / CLI, Git, Linux, Dev Productivity

Antifraud System

Personal Project

- Enterprise Spring Boot REST API for transaction risk validation with 4-tier RBAC role model, heuristic risk rules, and dynamic limit feedback.

Technologies: Java, Spring Boot, Spring Security, REST API, Validation Logic
